

WOOD WORKERS' TOOL CATALOGUE

JOHN
DANKS
& SON - Pty. Ltd.

324-330 Pitt St. (Near Liverpool St.) Sydney.

391-403 Bourke Street, Melbourne.

INTRODUCTORY.

This Woodworkers' catalogue contains a representative list of tools and is issued for the convenience of Woodworkers and Storekeepers.

Special wholesale terms to Storekeepers and Factories.

If the tool you require is not catalogued, we probably have it. If not, we will try and obtain it at the same price, if possible.

We guarantee every standard tool sold by us. We will replace free any tool found faulty, but do not guarantee tools against ill-usage.

Prices are liable to change without notice.

Prices are omitted owing to fluctuations occurring in almost every mail that arrives. We will send you typed lists of lines you require. If ordering in a hurry you can depend upon receiving the lowest prices possible.

Terms to regular customers are, payment less $2\frac{1}{2}$ per cent in the month following that in which the goods are invoiced; after that net.

If desirous of opening an account send two approved business references, either business houses or banks, or cheque or money order covering goods and freight.

No responsibility is accepted for goods damaged in transit. Do not accept delivery of them, until they have been inspected by the Railway Dept. or Shipping Co.'s representative.

Please add sixpence exchange for country cheques up to £25, over that amount add one shilling.

DISSTON'S SAW FILING GUIDE.

Especially designed to assist those not skilled in the art of saw-filing to file a saw correctly

Directions.

This cut shows a saw and the guide in proper position for filing. There are three marks on the upper hub of the swivel attachment, and one mark on the other. One of the three marks shows when it is in position for one side, and the other designates when it is in position for filing the other side. The third, or centre mark, shows when it is in position for filing Rip Saws. To obtain the correct position loosen the wing-nut and move the guide around to the point desired; after tightening wing-nut, loosen screw in file handle and adjust the file for the shape of tooth wanted

A good way is to select a tooth of correct shape and let file down into it, tighten set-screw in handle, then file a tooth to see if the shape suits. If not, turn the file a little to the right or left and try another tooth until the proper shape is obtained. Then file every other tooth. When one side is filed, reverse saw and attachment and file the other teeth. For Rip Saws, place the file at right angles with the saw, as mentioned above, and file every tooth. Always keep the file as nearly horizontal as possible. USE A 5½-INCH DISSTON SLIM TAPER FILE.

Length of jaw, 12½ inches. Price includes, Clamp, Filing Guide, File and Handle.

DISSTON'S SAW CLAMP AND FILING GUIDE.

This cut shows a saw and the guide in proper position for filing the first side. There are three marks on one of the hubs of the swivel attachment, and one mark on the other. One of the three marks shows when it is in position for first side, and the other designates when it is in position for filing the other side. The third, or centre mark, shows when it is in position for filing Rip saws. To obtain the correct position loosen the wing nut and move the guide around to the point desired; after tightening wing nut, loosen screw in file handle and adjust the file for the shape of tooth wanted. A good way is to select a tooth of correct shape and let file down into it, tighten set-screw in handle, then file a tooth to see if the shape suits. If not, turn the file a little to the right or left and try another tooth until the proper shape is obtained. Then file every other tooth. When one side is filed, reverse saw and attachment and file the other teeth. For Rip saws, place the file at right angles with the saw, and file every tooth. Always keep the file as near horizontal as possible.

Stanley "Pistol Grip" Adjustable Saw Set No. 42.

This Saw Set embodies several unique and important features not heretofore seen in tools of this description.

The shape of the Body and Handle enables the user to operate the tool with great ease and with the least possible exertion and the saw is held firmly against the gauge while the tooth is being set.

It can be readily adjusted by means of the knurled thumb screw to give a greater or less set to the teeth of the saw, according as the saw is to be used for coarse or fine work. As the anvil or part against which the plunger works is graduated, the same adjustment can be easily obtained for duplicate work.

The tool is so designed that the saw teeth are in plain view which enables the user to quickly adjust the tool to the tooth to be set.

The plunger and anvil are made of tool steel—hardened and tempered. All parts are carefully machined and are interchangeable.

The tool is given a fine black finish. Price

DANKS' MODERN MANTELPIECES GIVE DISTINCTION TO ROOMS.

STANLEY'S ADJUSTABLE PLANES

These Planes have maintained a leading position on the market for over 40 years. The cutter is thin and of uniform thickness. Briefly, the advantages are:—Ease in grinding. Less Grinding—as a thin cutter can be kept in condition by honing and less tendency to "stub off" the cutting edge when honing, hence the original bevel is kept much longer.

STANLEY DOOR TRIM PLANES

This new plane will make mortises for butts, face plates strike plates, escutcheons etc., up to a depth of $\frac{5}{16}$ and a width of 3 in. Its original feature is the method of mounting the cutter, which can be instantly set to work from either end of plane or across it. In addition, the cutter is cushioned by a spring which prevents taking a heavier chip than can be easily carried. A fence regulates the position of the cut and insures the sides of the cut being parallel. The depth of the cut is governed by a positive stop.

BULL NOSE PLOW, FILLETSTER AND MATCHING PLANE.

Price

This Plane has two interchangeable front parts that make it either an ordinary plow or a bull nose plow. With the bull nose attachment the cutter will easily work up to and into a 1/2 inch hole or any larger size, as in sash fitting, stair work, etc. It consists of a main stock, carrying a spur, depth gauge, and slitting cutter (this stock accommodates plow cutters of different widths), a fence which can be set for either plow or filletster work, and a separate filletster bottom. It has a rosewood handle. The cutters comprise 8 plow bits, 1/8, 3/16, 1/4, 5/16, 3/8, 7/16, 1/2 and 5/8 in.; a 1 1/2 in. filletster cutter and a 1/2 in tonguing tool and a slitting cutter.

No. 141. 9 1/2 inch long. Nickel plated 11 cutters.

BULL NOSE PLOW AND MATCHING PLANE

This is the main stock, with spur, depth gauge and slitting cutter, and the fence used in Plane No. 141, but without the filletster bottom and cutter. The cutters comprise 8 plow bits, 1/8, 3/16, 1/4, 5/16, 3/8, 7/16, 1/2 and 5/8 inch; a 1/2 inch tonguing tool and a slitting cutter.

No. 143. 9 1/2 in. long. Nickel Plated. 10 Cutters

Fig. 160 T

STANLEY DOVETAIL TONGUE AND GROOVE PLANE.

This novel tool accomplishes a result sought for many years by wood-workers in general, namely, to form a dove-tail tongue and groove with one hand tool.

It will cut any size grooves and tongues to fit with sides at flare of 20 degrees, where the width of the neck is more than one-quarter of an inch and the depth of groove not more than three-quarters of an inch. The tongue and groove are cut separately, and can be made with parallel or tapering sides. The operation of the Plane is simple. A circular containing instructions for assembling and operating is packed with each tool, or will be sent upon request. This circular also gives valuable suggestions as to the use of dovetail joints.

The compactness of the tool is shown in the illustration. All parts are carefully machined and are interchangeable. The entire tool is heavily nickel-plated and, together with its cutters is packed in a neat wooden box.

No. 444. 9 in. long. Nickel plated Price

Fig. 161 T

STANLEY COMBINATION PLANE.

Main Stock and Sliding Section are so arranged that cutters of different widths can be used. Fitted with adjustable Fence or Guide and Depth Gauge, also with Spurs for use in working across the grain, and can be used Right or Left Hand. This Plane combines seven tools

in one Beading and Centre Beading, Rabbet and Filletster, Dado, Plow, Matching, Sash, and a Slitting Plane. It has Seven Beading Tools—1/8, 3/16, 1/4, 5/16, 3/8, 7/16, 1/2; Ten Plow and Dado Bits—1/8, 3/16, 1/4, 5/16, 3/8, 7/16, 1/2, 5/8, 3/4, 7/8; a Slitting Blade, a Tonguing Tool, and a Sash Tool.

No. 45—Nickel Finish Rosewood Handle and Fences. Price complete with Bits, etc.

OLD ROOFS RECOATED WITH BITUMINOUS PAINT.

Fig. 162 T

STANLEY UNIVERSAL PLANE.

With 52 Tools, Bits, etc.

This tool in the hands of an ordinary Carpenter can be used for all kinds of work covered by a full assortment of so-called Fancy Planes.

This Plane is Nickel-plated, the 52 Cutters are arranged in four separate Cases, and the entire Outfit is packed in a neat Wooden Box. This Plane consists of:—

A Main Stock (A) with two sets of Transverse Sliding Arms, a Depth Gauge (F) adjusted by a screw, and a Slitting Cutter with Stop.

A Sliding Section (B) with a Vertically-Adjustable Bottom.

The Auxiliary Centre Bottom (C) is to be placed in front of the Cutter as an extra support, or stop when needed. This bottom is adjustable both vertically and laterally.

Fences D and E—Fence D has a lateral Adjustment, by means of a Screw, for extra fine work. The Fences can be used on either side of the Plane, and the Rosewood Guides can be tilted to any desired angle, up to 45 degrees, by loosening the screws on the face. Fence E can be reversed for Centre Beading Wide Boards.

An Adjustable Stop, to be used in Beading the edges of matched boards, is inserted on the left hand side of Sliding Section (B).

No. 55—Price complete with 52 Tools, Bits, etc.

Fig. 163 T Open Throat.

These Planes are for surfacing the bottom of grooves or other depressions parallel with the general surface of the work. They are made in two styles, differing in the form of throat. The closed throat is the ordinary form of router plane; the open throat, an improved design, giving more freedom for chips and a better view of the work and cutter. The latter has an attachment for regulating the thickness of the chip, and a second attachment for closing the throat for use on narrow surfaces. The bottoms of both styles

Fig. 164 T Closed Throat.

STANLEY ROUTER PLANES.

are designed so that an extra wooden bottom of any size desired may be screwed on, enabling the user to router on large openings.

A $\frac{1}{4}$ and $\frac{1}{2}$ inch cutter are furnished with each Plane. Cutters have screw adjustment, and can be held as shown in illustrations, or on the back of the cutter post, for bull-nose work.

Stanley Low Angle Block Plane.

No. 62 is especially adapted for use in cutting across the grain on heavy work, where more power is required than can be obtained by the use of the ordinary Block Plane.

Price

Fig. 169 T

Stanley Iron Dado Planes.

The great advantage of these Dado Planes over those made of wood is that they will keep true under all conditions even in the narrowest of widths. They have skew cutters, an adjustable depth gauge, and two adjustable spurs one on each side of the plane. This adjustable feature permits of the spurs being adjusted to take up wear, as well as for the depth of the cut.

The Plane is made in seven sizes from ¼ inch to 1 inch in width. In ordering always give the number (39) and width of cutter desired.

STANLEY JOINTER GAUGE FOR IRON
PLANES.

For use in connection with all sizes of Iron Jack or Jointer
Planes

To enable the workman to plane bevels of any angle
between 30 and 90 degrees, or to square up the edges of
boards with extreme accuracy.

A hole is bored in each end of the gauge so that a wood
face of any desired size may be attached, thus providing
a bearing surface longer or wider than the face of the
gauge itself

It may be attached to either side of
the Plane making it equally adaptable
for right or left hand work.

All metal parts are nickel plated.

Price

Fig. 177 T
Stanley Chute Board and Plane

This is a very important tool, especially for Pattern
Makers, Cabinet Makers, Printers and Electrotypers.

The board is made of iron, and has an adjustable
runway for the Plane. The swivel is indexed for
cutting a square and a mitre, but by means of the
Clamping Screw, can be set at any desired angle
from 0 to 90 degrees.

THE "DASPYL" BATH HEATER IS IDEAL FOR FAMILY USE.

STANLEY IRON SPOKESHAVES.

Fig. 219 T.

Stanley Hand Beaders.
"UNIVERSAL" TWO HAND.

No. 66. This is an excellent tool for beading, reeding or fluting straight or irregular surfaces and for light routing. The sample illustrated shows some of the work that can be done with its use. With each beader are furnished a square gauge for straight work, and an oval gauge for curved work. There are also furnished eight cutters sharpened at both ends and embracing the following assortment, 6 single beads $\frac{1}{8}$, $\frac{3}{16}$, $\frac{1}{4}$, $\frac{5}{16}$ and $\frac{3}{8}$ and $\frac{1}{2}$ inches; 2 fluting tools $\frac{3}{16}$ and $\frac{1}{4}$ inches; 4 reeding tools (2 beads $\frac{3}{16}$ inch, 3 beads $\frac{1}{4}$ inch, and 3 beads $\frac{1}{8}$ and 4 beads $\frac{1}{8}$ inch), 2 routers $\frac{1}{8}$ and $\frac{1}{4}$ inch, and a $\frac{5}{8}$ inch blank, which latter cutter the owner can file up as he desires.

The handles are curved so as to insure ample room between the workman's hands and the surface of the work. Made entirely of metal. Extra moulding cutters each.

No. 66. $11\frac{1}{2}$ ins. Long; 8 Cutters Nickel Plated.

No. 55. Raised Handle. 10 in. Long; $2\frac{1}{2}$ in. Cutter.
Price

Fig. 229 T.

Universal Spokeshave.

This will be found to be a very handy tool. The handles are detachable, and either one can be screwed into the top of the stock, enabling the user to work into corners or panel, as no other Spoke Shave can do.

A recent improvement is, that one handle has a right and the other a left hand thread, and the proper sockets to receive them are threaded accordingly. This prevents any possibility of the handles working lose when the tool is in use. The handles as well as the sockets in which they belong are lettered to avoid mistake. Two detachable bottoms are furnished, one for straight and the other for circular work. A movable width gauge allows the tool to be used in rabbeting. All metal parts are nickel plated and the handles are made of rosewood.

No. 67. Rosewood Handle, 9½ in. Long; 1½ in. Cutter. Price

Stanley adjustable
Try and Mitre
Squares.

One of the handiest tools in a Carpenter's Kit. Especially useful for doing short work about windows, doors, etc., or in putting on butts or locks. The Blade is adjustable and as it can be reversed, provides any size of try or mitre square within the capacity of the tool. In reversing, it is not necessary to remove the blade from the handle, consequently the tool is always assembled and ready for use.

The locking device is such as to insure the blade being firmly and accurately secured at any point desired. The edges of the Blade are machined, graduated in 8ths, 16th, and 32nds of inches and tool is square inside and out.

It is also an excellent depth and marking gauge. Both Handle and Blade are nickel plated. in three sizes.

Starretts' Stair Gauges.
 18 ins. Graduated. 18 ins. Plain.
 This gauge is to be used in connection with any carpenters' steel square and can be adjusted to any pitch or angle desired. For cutting in rafters, braces, stairs, etc., it will soon pay its cost and prove one of the most valuable tools in the carpenter's kit.

The attachment is furnished in plan or graduated in inches, 4th, 12th and 24th. It is made in the shape of a steel angle $\frac{7}{8} \times \frac{5}{8} \times \frac{1}{2}$ of an inch thick, ground straight and nickel plated.

Fig. 332 T.
Stanley Angle Divider.
 No. 30. Nickel Plated.
 With this Tool any angle can be found and bisected. Fitting moulding or other wood work to odd angles can be done with ease and certainty. It is also graduated for the parts of circle commonly used. A handy tool for laying out work.
 The Angle Divider is accurately made and can be used as a Try or "T" Square.
 Price

CERTAIN-TEED ROOFING IS WEATHERPROOF IN ALL WEATHERS.

Fig. 334 T

Stair Gauge Fixtures. No. 111

These fixtures can be readily clamped to a carpenter's steel square to form a gauge for various uses.

Sketch A shows the gauge as applied for laying out a stair stringer; sketch B, laying off hexagon angles; sketch C, as used as a centre gauge or in quartering a circle.

These fixtures are light, neat, efficient, and low in price.

Fig. 359 T. Corner Bit Brace
A standard tool for corner boring which permits of
effective pressure directly in line with the chuck. Ball-
bearing head, ball thrust bearing at the base of the
chuck, and free-acting sweep and steadying-handles.
No. 503. 8in. sweep. Price

Fig. 360 T. Universal Angular Bitstock.
For use in a bit brace or breast drill for drilling
at an angle or in awkward places generally. Equipped
with Master chuck it will take bitstock shanks, round
shanks from $\frac{1}{8}$ to $\frac{1}{2}$ in., and No. 1 Morse taper shanks.
Also can be used as a bit extension in straight work.
Angle of boring can be adjusted to any point from
180 degrees to 125 degrees.

Ball Bearing Ratchet Brace.

This is one of the best ratchet braces made. Completely covered and dust protected ratchet, and a ball-bearing sweep handle as well as a ball-bearing head and ball-bearing chuck. In short, it is ballbearing at every possible point resulting in an absence of friction which gives the brace a boring power in metal, cement or the hardest wood that is unsurpassed in a tool of this kind and relieves fatigue in operation.

STANLEY DOWELING JIGS.

Nos. 59 and 60

This Tool is for the purpose of enabling the user to bore dowel holes in the edge, end or surface of work with ease and accuracy. It will take any thickness of material up to three inches. It is also an excellent bit guide for mortising.

When making dowel holes with only a brace and bit it is also necessary to use a square to insure the hole being bored perpendicular to the edge of the stock, and even then more than ordinary skill is required to produce perfect work.

With the Doweling Jig the steel guide is automatically set to guide the bit properly when the Jig is clamped to the work.

A depth gauge is also furnished which can be used with or without the Jig. Where used without the Jig, the gauge should be set with the large end towards the point of the bit, but in using same with the Jig it should be set with the small end down, as shown in the cut

These Jigs are made entirely of metal, the working parts being milled true. All parts are nickel plated. No 59 with 5 Guides (1 ea. 1/4, 5/16, 3/8, 7/16 and 1/2 inch). Price

60 with 9 Guides (1 ea. 1/4, 5/16, 3/8, 7/16, 1/2, 9/16, 5/8, 11/16 and 3/4 inch).

Fig. 452 T

STANLEY DOWEL AND ROD TURNING MACHINE.

A tool that will appeal to Cabinet Makers, Pattern Makers, Furniture Manufacturers and especially to Supervisors and Instructors of Industrial Education.

It will not only cut dowels of various sizes and lengths to perfect dimensions, but with it one can also form rods of practically any length.

Ready made or stock dowels have a tendency to warp and shrink, making them very unsatisfactory to use where a close fit is desired.

With this machine the workman can cut his dowels when he is ready to use them and furthermore of the same material as the wood being worked.

It is designed to be operated by hand, and the crank can be adjusted for a long or short throw, giving power or speed to the machine as desired.

One cutter head complete for making dowels or rods 3/8 inches in diameter is furnished with each machine. Additional cutter heads with cutters 1/4, 5/16, 7/16, 1/2, 9/16, 5/8, 11/16 and 3/4 inches can be furnished if desired. These cutters are adjustable so that the dowels or rods can be made for a tight or a loose fit.

A workman whose tool equipment includes one of these machines and a Stanley Doweling Jig can make doweled joints with surprising quickness and accuracy.

"WOODHEAD" PATENT IMPROVED CRAMP.

—the one that both grips and cramps with one action of the lever, which acts as a lever of the first order when gripping the joist, and of the second order when cramping the work.

No. 5.—41 inch lever, 20 lbs. weight, to grip 1½ inch to 3 inch joists; suitable for all classes of flooring work.

Price

No. 5a. 41 inch lever, 25 lb. weight, made specially for 4 inch joists. Price

No. 6.—27 inch lever, 10 lbs. weight, to grip 1 inch to 3 inch joists; for Chamfer boarding and ceilings. With care may be used for flooring. Price

No. 7.—16 inch lever, 4 lbs. weight; for ceilings and light work only. Price

Fig. 507 T

The Little Booster Flooring Cramps.

A new style of Cramp that is quick and reliable in action, and very popular in Victoria and other States. Grips joists from 1½ to 3½ inches thick—will even grip firmly on to joists projecting only 1 inch above concrete. Thrust 4 inches long. The 2 feet 6 inch lever is very powerful. All parts interchangeable.

Made of Crucible Steel parts and mild Steel Lever. Does away with stooping. A special feature is that Ram (2) can be held at every half tooth—equal to 1/8 of an inch. The few simple instructions are on each Cramp.

STANLEY IMPROVED MITRE BOX.

The Saw Guide uprights are steel rods, and carry the saw guide cylinder in which the saw works.

Automatic catches at the top of the Saw Guides hold the saw locked and clear of the work when not in use, allowing the operator to use both hands when placing the work

Movable Stops are attached to the Saw Uprights, which can be set so as to permit the saw to cut only to the desired depth. or to prevent cutting through the base board.

Price, with Disston's Saw, 24 x 4

Fig. 548 T.

GOODELL PRATT'S STEEL MITRE BOXES.

With Saws.

These Mitre Boxes are furnished with high grade Back Saws, and can be guaranteed only when supplied with saws fitted to the boxes. All sizes have a capacity of 10½ inches at Right Angles and 7½ inches at Mitre.

No. 1244. With 24 x 4 inch Saw. Price each.

TOOL DEPARTMENT OPEN TILL NINE ON FRIDAYS.

Fig. 549 T

STANLEY MITRE BOX.

The Back and Frame Indexed Quadrant and Swing Arm Bearing are in one piece, and accurately machined.

The Quadrant is accurately indexed for cutting Multi-sided Pieces, and will remain mathematically correct.

The Swivel Arm can be set at any point between the Index Holes on the Quadrant by means of the Clamping Set Screw on the Swivel, just back of the Front Saw Guide Upright.

Can be used with a Panel Saw or Back Saw equally well. Will take moulding up to 4 inch.

Price, without saw

STARRETT'S NAIL HOLDER AND SET COMBINED.

The nail may be instantly placed under the spring in the lower end of holder, and there retained by the pressure of same ready to be driven home. After one blow is struck the holder is withdrawn, and the nail driven in and sunk in with the punch. A great improvement over the difficult way of trying to hold a small nail between the thumb and finger, at the risk of pounding them.

DANKS' PLUMBERS' BRASSWORK AND MATERIAL HAVE STOOD THE TEST OF TIME

No. 387.

Fig. 559 T

FRET SAW (STAR)

A fret saw machine is much more convenient to use than the hand frame and the Star machine shown above is popular among devotees of fret sawing. These machines have been quite a long time on the market, and many thousands of them have been sold in all quarters of the globe.

It is a well-balanced, easy-running machine with a heavy drive wheel giving it power, and two balance wheels, one each of iron and emery, adding steadiness to the motion. The arms are hung in the middle of their supporting casting to give free action, and are adjustable so they may be kept parallel.

There are adjustable clamps on the emery wheel, capable of embracing other sizes of emery and buffing wheels, grindstones, etc.

Equipped with nicked tilting saw table automatic dust blower, lever saw clamps, as described under Rogers Fret Saw, and adjustable saw guide.

Also furnished with each machine, twelve saw blades one wrench, three sheets of designs, impression paper and three drill points.

Frame of iron castings, japanned black with ornamental red stripes; arbors of steel.

Depth of arms, 18in. Price

Fig. 560 T

FRET SAW (ROGERS)

Nos. 1 and 2

An excellent feature of these machines is the type of adjustable lever saw clamps, which have a hinged jaw. This overcomes disagreeable raking overthrow of the saw blades and prevents breakage of blades. A jointed stretcher rod permits free action of the arms. The bearings to the latter are carefully adjusted.

Equipped with drilling attachment on the right side of balance wheel, and automatic dust blower.

Also furnished with each machine: twelve saw blades, one wrench, three sheets of designs, impression paper, and three drill points.

Iron castings, japanned black with red and gilt stripes; steel arbors; arm and pitman of best selected ash wood.

Height, 35in.

No. 1 with japanned tilting table and iron balance wheel. Price

No. 2 with nicked tilting table and emery balance wheel. Price

Fig. 562 T

Circular Saw Attachment For Millers Falls Lathe

Fig. 561 T

Lathe and Saws (Goodell)

A very efficient lathe with attachments, intended principally for amateur work.

It has two grooves on the drive wheel cone pulley to permit change of speed. The lathe head has a 2in. face plate and spur centre and screw centre for turning cups. Tail stock

has screw feed and can be clamped at any point. Drill spindle with chuck for drill points for wood boring.

The lathe is equipped with long and short tool rests, an emery wheel 4 x 1/2 in., an accurate drill chuck (Star) holding 0 to 1/2 in. diameter round shank drills for boring in metal or wood, and five turning tools wrench and drill points, etc.

MILLERS FALLS LATHE

Fig. 563 T

No. 417.

For working on wood and light metals where power is lacking, the lathe illustrated above will give excellent service. It has a heavy drive wheel which increases its range of work over what can be done with lighter machines. There is a two-step cone for one inch belt on the drive wheel, with diameters of 18 1/2 in. and 19 1/2 in. Correspondingly, the head stock has two-step cone with diameters of 2 1/2 and 3 1/2 in.

WARD & PAYNE'S RIFFLER FILES

Fig. 564 T
Boring Machine

A standard tool with carpenters for many years. For house framing and boring railroad ties and other large sized boring where speed and large capacity are essential. Bores vertically or at any angle from the vertical within an arc of 50 degrees. The depth of the bore is regulated by a stop. Auger removed from hole by pushing the cranks to the left and continuing their revolution in same direction as when boring. The frame locks automatically at topmost point in suspension, and is released by pressure upon thumb latch. Has adjustable cranks to regulate speed and power.

Wood bottom board. Spindle, cranks, upright, and angle rods made of steel. Steel and machined parts polished. Other metal parts japanned. Handles of stained hardwood.

Machine made to bore to depth of 12 in.
Height, 25in.

During the last few years, Carborundum in all its various forms has come rapidly into favour as an abrasive. These stones are practically unequalled for putting a keen edge on Carpenters' and Mechanics' Tools. Being porous they may be modified in their cutting by filling with vaseline. They may be thoroughly cleaned when filled up with oil and grit, by being placed in a fire without any injury to the stone.

PAINTERS CAN RELY UPON OUR PAINTS, COLORS, AND PAINTERS' BRUSHWARE.

36in. Church Bell cast in our Melbourne Foundry, weighing half a ton.

BELLS

For Churches, Schools, Fire Towers, Ships, etc., we make and supply Bells fitted with cast iron gudgeons, rope wheel and gun-metal bearings.

For the larger size bells we recommend the use of the gudgeon. It is claimed by many authorities that the swinging motion of the bell allows the sound to travel over a much greater area.

Gudgeons for bells under 16in. diameter are supplied with lever, and those of 16in. and over, with rope-wheel.

Bells up to 20in. diameter can be fitted with our patent clapper and trigger. This does away with the necessity of swinging the bell.

Sizes of bells from 8in. to 36in. diameter.

All bells are measured across the mouth.

We also supply gongs for mines and other purposes.

Prices of all bells are at per lb. Gudgeons are extra to price of bell.

The patent clapper is charged extra on bells up to 20in. diameter.

Send for Explanatory leaflet and price list.
